

Aim: Dynamic routing Protocol RIP V2Components Required:

1. Routers ————— (3)
2. Serial DCE wires ————— (3)
3. End Devices ————— (2)
4. Copper cross-over wires — (2)

Procedure:

Place 3 routers on screen with component name Router 0, Router 1, and Router 2 respectively. On each router go to physical mode turn off the device add 'WIC-2T' module and power on the device. Now connect serial 0/1/0 of Router 0 to serial 0/1/0 of Router 1; serial 0/1/1 of Router 1 to serial 0/1/0 of Router 2, serial 0/1/1 of Router 2 to serial 0/1/1 of Router 0. Add 2 PC to the network with name PC0 and PC1. Connect PC0 to FastEthernet 0/0 of Router 0 and PC1 to FastEthernet 0/0 of Router 2.

### On PC0:

Enter IP address	192.168.0.2
Subnet mask	255.255.255.224
Default gateway	192.168.0.1

### On PC1:

Enter IP address	192.168.0.130
Subnet mask	255.255.255.224
Default gateway	192.168.0.129

### On Router0:

1. [yes/no]: no
2. Router > enable
3. Router # config t
4. Router (config) # int fa 0/0
5. Router (config-if) # ip add 192.168.0.1 255.255.255.224
6. Router (config-if) # no shutdown
7. Router (config-if) # exit
8. Router (config) # int serial 0/1/0
9. Router (config-if) # ip add 192.168.0.33 255.255.255.224
10. Router (config-if) # clock rate 64000
11. Router (config-if) # no shutdown
12. Router (config-if) # exit
13. Router (config) # int serial 0/1/1
14. Router (config-if) # ip add 192.168.0.47 255.255.255.224
15. Router (config-if) # no shutdown
16. Router (config-if) # exit

17. Router(config)# router rip
18. Router(config-router)# version 2
19. Router(config-router)# network 192.168.0.0
20. Router(config-router)# network 192.168.0.32
21. Router(config-router)# network 192.168.0.97

### On Router 1:

1. [yes/no]: no
2. Router > enable
3. Router # config t
4. Router(config) # int ~~fa 0/0/0~~ serial 0/1/0
5. Router(config-if) # ip add 192.168.0.34 255.255.255.224
6. Router(config-if) # no shutdown
7. Router(config-if) # exit
8. Router(config) # int serial 0/1/1
9. Router(config-if) # ip add 192.168.0.65 255.255.255.224
10. Router(config-if) # clock rate 64000
11. Router(config-if) # no shutdown
12. Router(config-if) # exit
13. Router(config) # router rip
14. Router(config-router) # version 2
15. Router(config-router) # network 192.168.0.32
16. Router(config-router) # network 192.168.0.64
17. Router(config-router) # exit

### On Router 2:

1. [yes/no]: no
2. Router > enable
3. Router # config t

4. Router(config)# int fa 0/0
5. Router(config-if)# ip add 192.168.0.129 255.255.255.224
6. Router(config-if)# no shutdown
7. Router(config-if)# exit
8. Router(config)# int serial 0/1/0
9. Router(config-if)# ip add 192.168.0.66 255.255.255.224
10. Router(config-if)# no shutdown
11. Router(config-if)# exit
12. Router(config)# int serial 0/1/1
13. Router(config-if)# ip add 192.168.0.98 255.255.255.224
14. Router(config-if)# clock rate 64000
15. Router(config-if)# no shutdown
16. Router(config-if)# exit
17. Router(config)# ~~int serial~~ router a/h
18. Router(config-router)# version 2
19. Router(config-router)# network 192.168.0.64
20. Router(config-router)# network 192.168.0.96
21. Router(config-router)# network 192.168.0.128

### Verification:

1. Go to PC0 terminal and type command
2. Ping 192.168.0.2
3. Ping 192.168.0.30
4. Repeat steps 2 and 3 for PC 1

Result : Dynamic routing using Protocol RIP V2 was successfully done.
